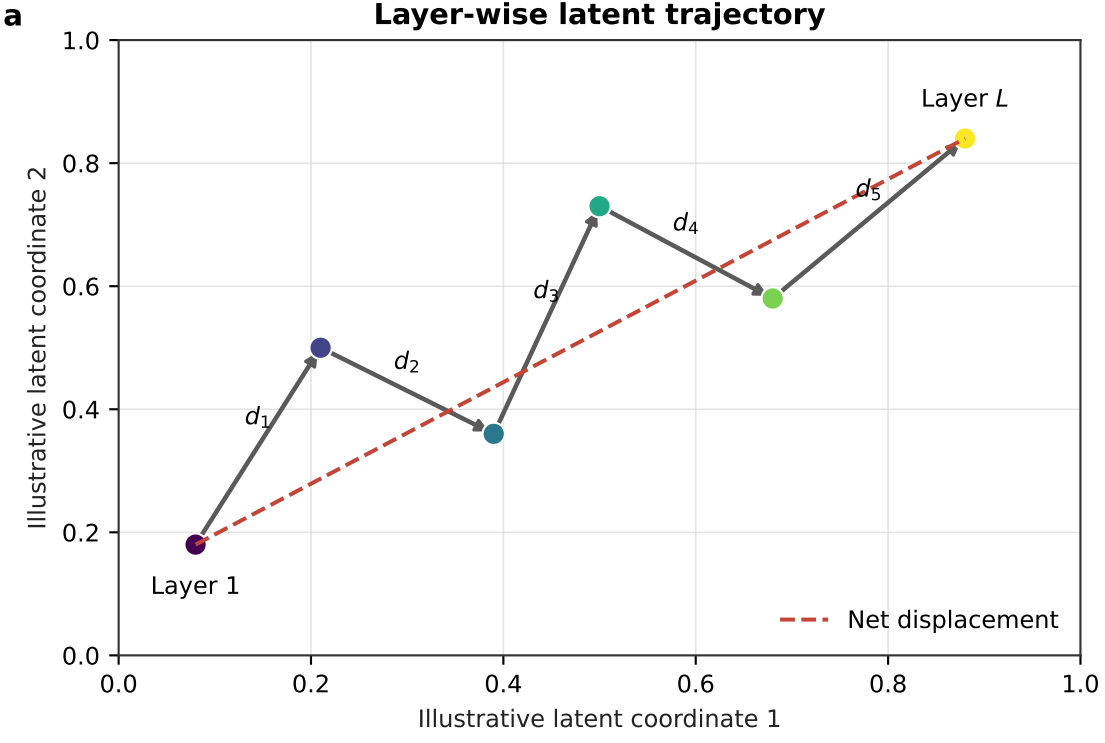
Internal trajectory and metric intuition

a



b

Core geometric quantities

Step movement $d_t = \|z_{t+1} - z_t\|_2$

Movement between adjacent layer snapshots

Path length $P = \sum_t d_t$

Total distance traveled through latent space

Net displacement $D = \|z_L - z_1\|_2$

Straight-line distance from first to final state

Path efficiency $E = D/P$

Directness of the trajectory, bounded by 0 and 1
